AAA® Launches ClauseBuilder® AI (Beta) to Streamline Arbitration and Mediation Agreements

Innovative technology offers a smarter, faster way to draft essential ADR clauses

NEW YORK (June 12, 2024)—The American Arbitration Association® (AAA) and its international division, the International Centre for Dispute Resolution® (ICDR®), today announced the launch of ClauseBuilder AI (Beta). This new generative artificial intelligence (AI)-powered tool is designed to simplify the creation of clear and effective arbitration and mediation clauses for lawyers and businesses of all sizes across various industries.

“With ClauseBuilder AI, we’re providing a cutting-edge solution to quickly generate high-quality clauses, including our new AI Clauses, that users need,” said AAA President and CEO Bridget McCormack. “We are committed to delivering technology that makes alternative dispute resolution easier and more accessible.”

ClauseBuilder AI leverages the latest generative AI advancements in natural language processing and machine learning techniques to understand user intent and deliver tailored clause suggestions. The design and development process was done with support from our long-standing partners at Zensar Technologies. “We are proud to have partnered with the American Arbitration Association in developing ClauseBuilder AI. This innovative tool exemplifies how advanced AI and collaborative efforts can streamline complex processes, delivering significant value to legal professionals and businesses by creating impactful solutions for clients,” said Manish Tandon, chief executive officer and managing director of Zensar Technologies.

The product was tested internally and externally, including by students at Vanderbilt University Law School, led by Caitlin Moon, co-director of the Vanderbilt AI Law Lab, and Suffolk University Law School, led by Christopher Gibson, professor and director of the Alternative Dispute Resolution Program. In the final testing phase, AAA used Vellum AI, a platform specializing in developing, deploying and managing large language model applications, to refine and benchmark the performance of ClauseBuilder AI against the AAA’s established ClauseBuilder tool, ensuring optimal results.

“We’ve spent as much time testing ClauseBuilder AI as we have building it to ensure a seamless and efficient user experience while generating high-quality clauses,” said AAA Chief Innovation and Information Officer Diana Didia.

Professor Gibson said that his students found ClauseBuilder AI helpful and intuitive. It provided detailed and accurate drafts of their arbitration and mediation clauses while reducing the time it took to complete their projects. “The students were pretty amazed by this generative AI tool,” he said.

With over 500 curated clauses tied to variables such as case size, industry, location and rules, ClauseBuilder AI offers unparalleled customization and flexibility. The American Arbitration Association is committed to delivering workflow solutions that enhance user satisfaction and drive efficiency, and it is planning additional releases throughout 2024 to support its processes.
